

RecWater Cleaning Instructions

RECASENS

BCN  1886

Rot causing microorganisms, such as mold, algae, and bacteria, can damage acrylic coated canvases. To prevent the occurrence of these microorganisms and ensure the quality of our fabrics, Recwater canvases are treated with antimicrobial products that offer optimal protection. Antimicrobial products prevent microorganisms from adhering to the fabric. However, these microorganisms may grow on dirt and other foreign substances if not removed from the fabric. To maximize the lifetime of the Recwater canvases, it is essential to clean the fabric periodically.

- To clean the fabric, use a mild soap diluted in warm water (100°F max). Apply the cleaning solution with a sponge or soft brush, rinse thoroughly and let dry. **Never use hard detergents or products containing ammonia or solvents.**
- Recwater fabrics can be maintained in between cleanings with a soft brush to remove most of the dirt and dust.
